JATIN PATNAIK

✆ +91 7978985147 ✉ jatinpatnaik27@gmail.com LinkedIn GitHub

Bachelors in Computer Science with a solid background in programming and database concepts, C++, Python, and SQL. Experience in working on academic projects that include backend programming, data processing, and system monitoring applications. Familiar with problem-solving, debugging, and understanding business requirements and motivated to leverage this experience in an enterprise software setting and learn new technologies rapidly.

Education

C.V. Raman Global University **Oct 2022 – May 2026**

Bachelor of Technology in Computer Science and Engineering | CGPA-7.70/10 *Bhubaneswar, India*

Vidwan Junior College **May 2021 – March 2022**

Science | Percentage-60% *Koraput, India*

Modern English School **April 2019 – March 2020**

Percentage-70% *Koraput, India*

Projects

Dam Management System | *(Using Sensors)* **August, 2023**

- Developed an IoT-based Dam Management System integrating multiple sensors for real-time water level and environmental data monitoring.
- Collaborated in a team of 4 members to build both hardware and software components for end-to-end system functionality.
- Used microcontrollers and sensor networks to automate data measurement and control dam gate operations efficiently.
- Developed backend logic for sensor data logging, analytics, and alert notifications during critical conditions.
- Enhanced decision-making by integrating data visualization dashboards for real-time monitoring.

Usage of Machine Learning in Agile Testing **September, 2024**

- Developed a machine learning–driven testing framework to enhance Agile software testing efficiency and accuracy.
- Applied Gradient Boosting and XGBoost for test case prioritization, improving regression testing time by 30–40%
- Conducted a comprehensive literature study of prior ML-based testing models to identify research gaps and practical limitations.
- Achieved measurable improvements in testing speed, reliability, and software quality through data-driven decision-making.

Library Management System (C++)

- Developed a console-based system to manage library books using classes and file handling.
- Implemented search functionality to find books by ID.
- Displayed all books in a readable format using file reading operations.
- Used OOP concepts, file handling, and basic data management.

Achievements

- Selected for Smart India Hackathon (SIH) at the intra-college level 2023.

Skills

Programming: C++, Python, SQL

CS Fundamentals: Data Structures and Algorithm, DBMS, OOPs

Developer Tools: Google Collab, Visual Studio Code, MS Office

Concepts: Time Complexity, Problem Solving

CERTIFICATIONS

- Automating Real-World Tasks with Python – Coursera
- Configuration Management and the Cloud – Coursera
- Using Python to Interact with the Operating System – Coursera
